                                                                                                                          zero.
```

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality -30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:
This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines. ECORI HindIII

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

(I) may also be useful as a diagnostic tool for a disease or disorder such as those above. AAS97159-AAS97195 represent human protease coding sequences and primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polypucleotide (II) encoding (I). (I) may be used to screen for substances (5) that may modulate its activity. Administering 5 (which modulates protease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoletic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney) immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g., central or peripheral nervous system diseases, migraine, pain, sexual dysfunction, mood disorders, attention disorders, cognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 30; Figure 1V; 232pp; English

CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CC sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; CC immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; cantidiabetic; hypotensive; dermatological; immunosuppressant; CC antificialmatory; antibacterial; antiviral; antifungal; antirheumatic; cardiant; thrombolytic; coagulant; vasotropic; CC antithyroid; and antianaemic. The sequences can be used for determining CC the presence of or predisposition to, or preventing or treating CC pathological conditions associated with an ORFX associated disorder. The CC nucleic acids can be used to express ORFX proteins in gene therapy CC vectors. The proteins and nucleic acids may be used to treat cancers, CC graft vs host disease, cardiovascular disease, diabetes mellitus, CC sylthematosus, severe combined immunodeficiency (SCID), AIDS, viral, CC erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, CC allergies, aphastic anaemia, burns, wounds, bone and cartilage damage, CC concurrant haemoglobinuria, antiinflammatory disease; to enhance

The proteins given represent the signal peptide CC and an N-terminal fragment of a secreted protein. The nucleic acid CC sequences can be used for producing secreted human gene products. They CC can also be used to develop products for diagnosis and therapy. The CC proteins obtained may have cytokine activity, cell convileration/differentiation activity, haemacropoiesis regulating CC proteins obtained may have cytokine activity, reproductive hormone crequiating activity, tissue growth regulating activity, reproductive hormone convileration activity, chemotactic/ chemothetic activity, haemacropics and the convict of thrombolytic activity, receptor/ ligand activity, anti-inflammatory can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for colventide into a call of a criminal period of a colventide into a call of a criminal color activity and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cDNA libraries derived from liver, lung, large intestine, colon, thyroid and pancreas tissue

The present invention describes substantially purified human proteins (creferred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABN15762 to ABN27252 encode the human ORFX of the time of the proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX associated continuous associated with ORFX associated of a medicament for treating a creating or preventing a pathology associated with an ORFX associated continuous associated in the creating a creating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                              The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoises regulating activity, tissue growth factor activity, haematopoises and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

AAIT3060 to AAIT9867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs). AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides. For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; single nucleotide polymorphism; SNP; genome; protein therapy; vaccine; probe; diagnostic assay; quantitation; restorative therapy; polymorphic; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (1) may be used as antigens in the production of antibodies specific for polymorphic polypeptides. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides in samples.
                                                                                                                                                           Sequence 1221 BP;
                                                                                                                                                                                                              Pig aminoacylase I cDNA is cloned from plg kidney poly (A) mRNA giving clones lambda pKAmA -1 to -10. The longest insert fragment in lambda pKAmA-10 (1.4kb) was isolated and sequenced. The sequence may be used to transform Saccharomyces cerevisiae to produce

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAI73672
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 8
                                                    AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs). C AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by C them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides. CC For example, (I) may be used to treat disorders by rectifying mutations cor deletions in a patient's genome that affect the activity of CC polypeptides by expressing inactive proteins or to supplement the CC patients own production of polypeptide. Additionally, (I) and its C complementary sequences may also be used as DAA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be used as ratigens in the C c production of antibodies encoded by (I) may be used as antigens in the CC continuation of antibodies specific for polymorphic polypeptides. The polypeptides encoded by (I) may be used as antigens in the CC antibodies may also be used as diagnostic agents for detecting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    닭
                                                                                                                                                                                            CC therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate expression of polymorphic polypeptides. CC For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of CC polypeptides by expressing inactive proteins or to supplement the CC patients own production of polypeptide. Additionally, (I) and its CC complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative CC therapy. The polypeptides encoded by (I) may be used as antigens in the CC production of antibodies specific for polymorphic polypeptides. The CC antibodies may also be used to down regulate expression and activity. CC The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs).

AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein polynucleotide sequences. The sequences can be used in gene and protein polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; Page 242; 2653pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polymorphic nucleic acid sequences, useful in genetic testing

CC GC, where differential expression of Gs is indicative of GCA.

Also included are modulating (M2) GA by contacting GC with an agent CC that alters the expression of at least one gene in Gs; (2) screening (M3) CC for an agent capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC level of expression in a sample of the tissue of gene(s) from Gs, where CC the level of expression of the gene is indicative of inflammation; CC (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen CC or sterile inflammatory disease, by contacting a tissue having CC inflammation with an agent that modulates the expression of gene(s) CC from Gs in the tissue. M is useful for detecting GA; M3 is useful for screening an agent capable of modulating CC detecting an inflammation (especially chronic) an allergic response in a subject, exposure of a subject to a pathogen or sterile conflammatory disease (e.g. psorlasis, rheumatoid arthritis, CC periodontal disease; also bacterial infection, viral infection, cC parasitic infection, protozoal infection, fungal infection and M5 is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; ss; granulocytic cell; DNA chip; bacterial infection; viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis;
Note: The sequence data for this patent did not form part
                                   parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (GCA), by detecting the level of expression of gene(s) (Gs) identified DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID No. 378; 114pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of the printed specification, but was obtained in electronic format directly from WIPO at
AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs). AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases

For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (I) may be used as antigens in the production of antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; ORF; open reading frame; ORFX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; immune modulation; haematopolesis regulation; tissue growth; angiogenesis; activin; inhibin; chemotactic; chemokinetic; haemostatic; thrombolytic; tumour inhibition; bodily characteristic; fertility; behaviour; cancer; proliferative disorder; neurological disorder; cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; vasotropic; antipsoriatic; antidabetic; cytostatic; nootropic; antipsoriatic; antidabetic; cytostatic; incotropic; cardiant; hypotensive; antithyroid; antilfalmmatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; fungicide; gene; ss.

CC designated ORF (open reading frame) 1-454, and sequences ABPJ5054 can ABPJ5054 represent cDNAs encoding them. The invention also encompasses CC polypeptides at least 80% identical to the ORF1-ORF454 (collectively coreferred to as ORFX) proteins, polynucleotides at least 80% identical to the ORF1-ORF454 (collectively coreferred to as ORFX) proteins, polynucleotides at least 80% identical to the ORF1-ORF454 (collectively coreferred to as ORFX) proteins, polynucleotides at least 80% identical to the ORF1-ORF454 (collectively coreferred to as ORFX) proteins, polynucleotides and those cells comprising ORFX comprising ORFX polynucleotides and comprising ORFX proteins, antibodies of specific for ORFX proteins of ORFX proteins, antibodies of polypeptides, methods of screening for modulators of ORFX polynucleotides and comprising methods of screening for modulators of ORFX polynucleotides and comprising methods of screening individuals for a predisposition to an CC or protein thation, immune modulation, haematopolesis regulation, cell proliferation, cell proliferation, cell differentiation, immune modulation, haematopolesis regulation, cell tissue growth, anglogenesis, activin or inhibin activity, chemotactic/ critisue growth, anglogenesis, activin or inhibin activity, chemotactic/ confemokinetic activity, haemostatic activity, thrombolytic activity, chemotactic/ confemokinetic activity, haemostatic activity, thrombolytic activity, chemotactic/ confemokinetic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, confemokinetic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, construction, disorders such as palepsy and Alzheimer's disease, consecuted may also be used as a consecuted for producer of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous construction and cloning of homologous consecuted seque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 14

The ACY-1 similar polynucleotide and encoded peptide sequences can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic agents that modulate enzyme activity in cells and tissues that express the enzyme. ACY-1 has been found to be expressed in humans in the placenta, T cells from T cell leukemia, ovary, brain, lung and leukocyte and therefore may be a drug target for cancer therapy and act as a diagnostic marker for these cancers. The present sequence represents a cDNA encoding an enzyme similar to human aminoacylase-1 (ACY-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated nucleic acid molecules encoding enzymes similar to human aminoacylase-1, useful as a drug target and diagnostic marker for cancers e.g. T cell leukemias and ovary, brain or lung cancers -

CC plant, and transfecting the plant with the vector under conditions such that the metabolism of the plant is altered by expression of the isolated curvaletic acid from the vector, e.g. such that a stunting phenotype in an industrial plant is produced and a process for the characterisation of condustrial plant is produced and a process for the characterisation of conference in the plant is produced and a process for the characterisation of conference in the fractionated biological samples, a gas chromatography conference in the reference conference in the fractionated biological samples and the reference samples, (c) treating the fractionated biological samples and the reference samples, (c) treating the fractionated biological samples and conference samples with the mass spectroscopy apparatus to generate spectroscopic data corresponding to the fractionated biological samples and the reference samples and (d) processing the chromatographic and the spectroscopic data with the data analysis software. The nucleic acid and the vector are useful for altering the metabolism of a plant and for stunting a plant. The nucleic acids are useful in agriculture to create conference to any plant species. The present sequence is a conference to a supples and the respective to the fractionated biological samples and conference is a conference of the vector are useful and for altering the metabolism of a plant and for stunting a nucleic acid database with plant EST (expressed conference call database with plant EST (expressed conference call database with plant tool) stringency and conference call altering the metabolism of a plant and for the vector are the conference call database with plant tool) stringency conference call database with plant tool) stringency conference call alternument tool) stringency conference call alternument tool particular call and conference call alternument tool) stringency calls and ca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to polynucleotide and amino acid sequences identified in one or more metabolic pathways that lead to dwarfism and stunting in plants. Also included are vectors comprising the polynucleotides, transgenic plants (including the seed and leaf) transfected with the polynucleotides or vectors, a process for altering the metabolism of a plant comprising providing the above vector and a the metabolism of a plant comprising providing the above vector and a plant comprising provi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotide and amino acid sequences identified in one or more metabolic pathways that lead to dwarfism and stunning in plants, useful in agriculture to create dwarf varieties of any plant species -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Reddy SA, Larrinua MI, Ruegger M, Weglarz T, B]
